

Dear FCC,

I disagree with petition RM-10811.

Reason: It promotes to maintain a CW requirement for certain classes, to which I object.

Maintaining a morse requirement will only prevent individuals talented in radio engineering from joining the ham radio ranks.

What I suggest instead, is to remove the "Element 1" (CW) requirement for all classes.

At the same time, the written exams should increase in rigor for increases in class, with a substantial theoretical exam for the extra class, on par with an electronics associate degree.
